

ProMed Enabler

Bring your HIS/LOB & Document Management worlds together with the touch of a button.

The **ProMed Enabler** allows hot-key access to stored documents from within HIS screens or any other line of business (LOB) application. A user can immediately review relevant documents for the patient/account currently open on their HIS screen with the press of a button.

The **ProMed Enabler** allows your users to access pertinent documents and files directly without reentering patient name, MR#, or other identifier. With the press of a simple hot-key, a viewing window is launched, using search data extracted from your application. Users can access a complete list of stored documents, including scanned images, transcribed reports, print streams and electronic files—all pertaining to this patient/account. Depending on the HIS application, these can include patient records, accounting invoices, employee HR records, or any other supporting documents. **ProMed** brings it all together for you, and requires **zero** data entry to retrieve stored files.

Patient Charts with ProMed Enabler

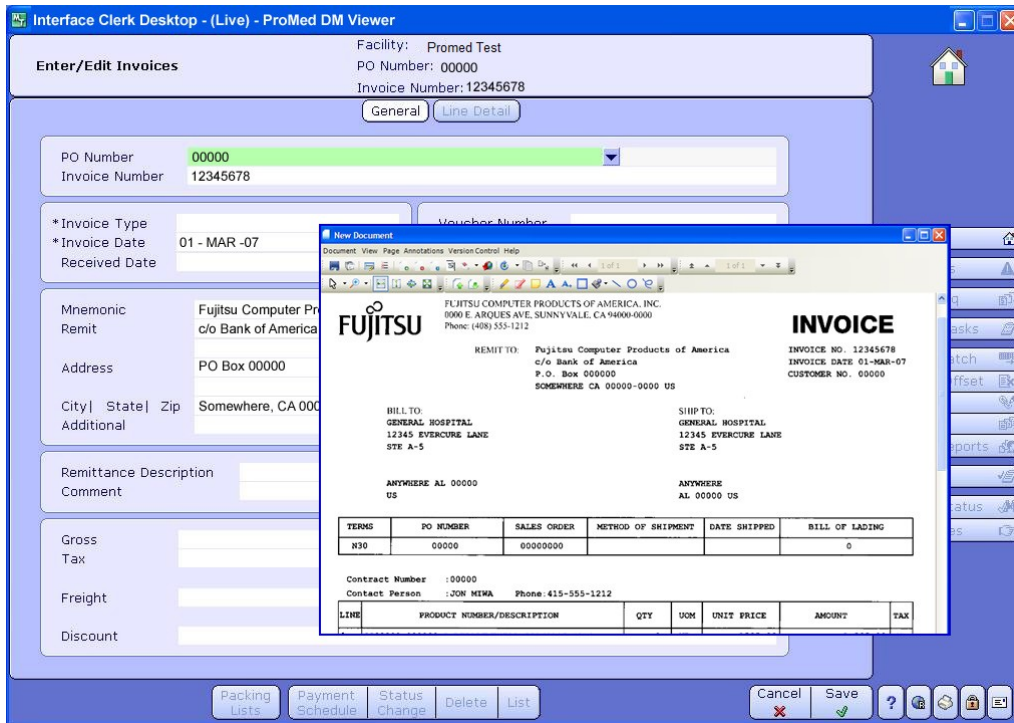

The screenshot displays the 'Enterprise Medical Record' interface for patient Angus Appleby. The patient's name is at the top left, and their DOB (10/26/68) and MRN (6035771609) are at the top right. Below the patient name is a 'Summary' section with tabs for 'Summary List', 'Diagnoses', 'Indicators', 'Risk/Legal', 'Demographics', 'Providers', 'Visit', 'Contacts', 'Insurances', and 'Abstract'. A 'Patient Summary' section shows 'Visit History' with an entry for 'Outpatient 5/11/09 Lab Draw - McDiggle, Shamus Q MD 78079'. Below this is a 'Folder: [0003870688]' section containing a table of documents.

Template	Patient Name	MRN	Account Number	Date Created	Date Filed
Advance Directives	Appleby, Angus	0003870688		9/28/2009 11:05:57 AM	9/28/2009 11:05:58 AM
InsuranceCard	Appleby, Angus	0003870688		10/7/2009 1:28:22 PM	10/7/2009 1:28:23 PM
Office Visits	Appleby, Angus	0003870688	006035771609	9/29/2009 6:22:16 AM	9/29/2009 6:22:16 AM
Office Visits	Appleby, Angus	0003870688	006037590642	9/29/2009 7:38:33 AM	9/29/2009 7:38:33 AM
Patient ID - drivers license	Appleby, Angus	0003870688		10/7/2009 12:42:15 PM	10/7/2009 12:42:17 PM
Privacy Notice	Appleby, Angus	0003870688		9/28/2009 11:00:56 AM	9/28/2009 11:00:58 AM

Benefits

- Clinical and non-clinical user access to stored document images, MS-Office documents including email, as well as faxes and any other electronic file types, plus archived microfilm images
 - Increased user productivity with fewer keystrokes
 - Reduced learning curve with simplified user interface
 - **NO** special software or services required from your HIS/LOB application!

Accounts Payable with ProMed Enabler

The ProMed Suite of solutions includes:

ProMed Scanning [*Similar hot-key application available to scan from any HIS.]

Provide document scanning and integrated data capture for fax, email, and electronic files. Full-spectrum capture provides the groundwork for our ProMed Series of work process automation applications.

ProMed DM (Document Management)

Store document images, MS-Office documents including email, as well as faxes and any other electronic file types. Provide document check-in/check-out capability with versioning and full-text search. Support the archival of digital images to microfilm, and the retrieval of microfilm images into digital format. "Lockable" content stores simplify data backups, supporting High Availability Configurations for guaranteed enterprise-wide uptime.

ProMed Flow

Enable robust workflow with graphical process model and built-in due dates, alerts, notifications, approval, and process audit reporting.

ProMed Chart Manager

Manage the chart analysis process online using document images, chart templates, workflow, and automated deficiency notification/reporting. In-process charts can be sorted by deficiency, chart type, physician, date, or location. A single graphical user interface displays chart completion status.

ProMed Release of Information

Provide a user-friendly graphical checklist to select archived images for release. Patient charts can be released in multiple formats (print, fax, and electronic). Activity is tracked by user and by patient for auditing/reporting. Can be integrated with an online transactional package to facilitate payment.
